No problem Chuck! I know how busy/crazy things get, especially when you are in the field working on

Nonresponsive based on revised scope

Nonresponsive based on revised scope

Do you have any information on this?

Thanks.

Howard

Howard,

Yes I committed to getting that information to you on Friday. My oversight.

Nonresponsive based on revised scope

Tidewater Air Monitoring Evaluation (TAME) study – Progress is being made on this project although at a slower pace than originally projected. AQM has renovated the trailers and they are inspected and ready for use. AQM staff is currently working on making modifications to the roofs to allow the T640X inlet to be mounted. Several trips have been made to the Tidewater area to identify potential locations. DEQ's Office of Communications wants to meet with both communities before finalizing the monitoring site locations so we have a list of potential sites and will not have a final list until we meet with both communities. The project has been slowed due to the pace of procurement which has been limited by the fact that the AQM procurement officer left in October and the position was only recently filled (March 10th). Our Central procurement office is also short staffed. The original projection on when we would be able to start sampling was the first 6 day sampling date in September. This will have to be pushed back to November to accommodate the adjustments to the procurement schedule. I am working on an adjustment to the work plan to accommodate this change.

Please let me know if you need anything else from me on this.

Subject: updates on two items

Hi Chuck,

Today is the Regional Office/OAQPS call for air toxics. I was hoping you could find a few minutes to provide an update on and the Community Scale Air Toxics Grant study.

Thanks.

Howard
